

The history of Izhevsk State Medical Academy began 90 years ago. It was opened as an institute in 1933 by the Decree of the Council of People's Commissars of the RSFSR of April 15, 1933 and consisted of one faculty – general medicine. At that time, the basic principle of training specialists for the medical industry was based: integration of education, medical practice and scientific activities. The Institute trained doctors, organized medical care for the population, and solved scientific problems. Thanks to a huge and clearly organized work of specialized medical institutions with the participation of employees of the Institute During the Great Patriotic War, more than 85% of the wounded soldiers and commanders of the Red Army were returned into service. And in the subsequent years of its existence, the institute took one of the leading places among medical universities in terms of the level of methodological work, skillful combination of professional and moral education of future doctors. In 1983, the Institute was awarded the Order of Peoples ' Friendship for its services in training qualified specialists, developing medical science and public health. In 1995, Izhevsk State Medical Institute received the status of "academy" and is currently one of the best medical universities in Russia. Currently a professorial-teaching staff of the Academy is 384 people, among them: 77 doctors of sciences and 182 candidates of sciences. Training is conducted at five faculties: General Medicine, Pediatric, Dental, Faculty of Foreign students and Faculty of Additional Education. The total number of students is 3,859, including students from 18 countries.
